KESTREL[®]
rely on it

Features and benefits of Kavex[®]'s PVC-UE textured wood effect shiplap cladding.

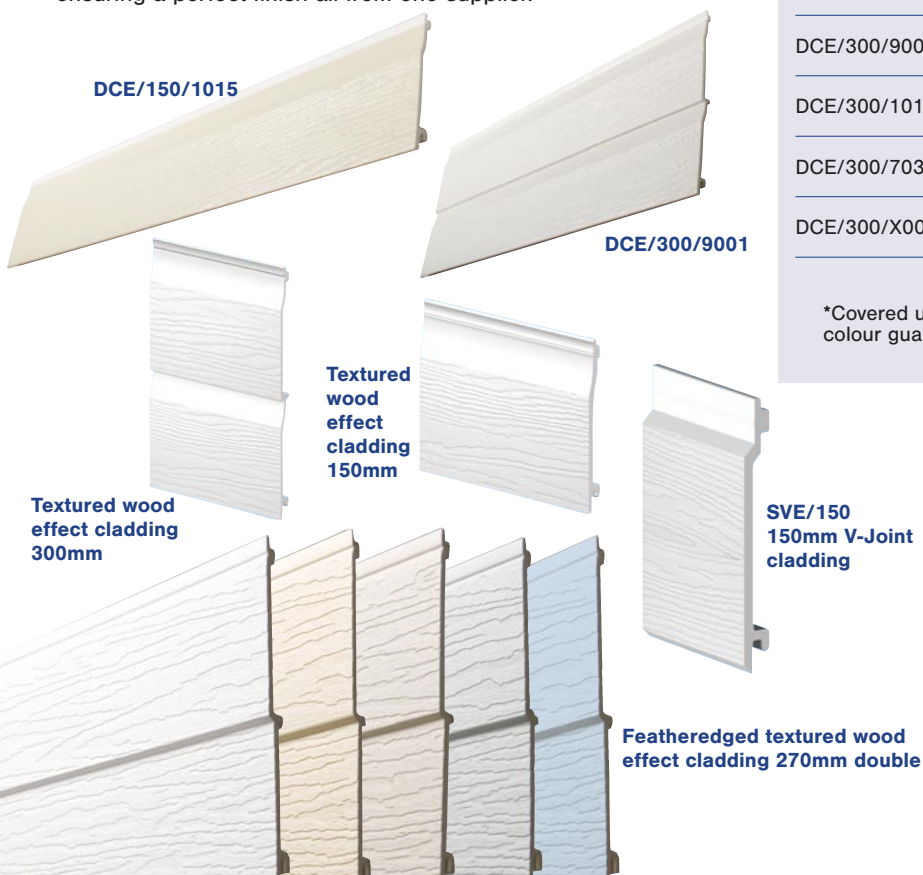

For over 20 years Kestrel has been manufacturing a full range of PVC-UE roofline, cladding and window finishing products. High quality products, excellent customer service and a firm grasp of customers' requirements have led to Kestrel maintaining its position as a leading manufacturer and innovator.

These innovations include Kavex[®] textured wood grain effect PVC-UE Cladding and our latest overlapping Featheredge style cladding boards. Both provide a stylish and effective means to protect and decorate the exterior of homes and other buildings without the need for continual costly maintenance and decoration.

All of our cladding offers a lower thermal conductivity than timber, concrete, mineral fibre boards or brick (0.06 W/mK). It successfully imitates timber with authentic textured wood effect PVC-UE features and can be installed using traditional wood installation skills, practices and tools.

The Kavex[®] range are available in 2 size formats, single plank (150mm) and double plank (300mm) whilst the DFE Featheredge board is available as a double board (270mm). Both offering quick and easy installation.

PVC-UE cladding is completely unaffected by damp, rot, decay, frost and is resistant to attack from insects. All of our products are manufactured using Kestrel's environmentally kind Calcium Organic stabilisers, guaranteed to give the best colour resistance. Available in white, cream, sand, light grey and light blue including a comprehensive range of corners, edges and joint trims to match ensuring a perfect finish all from one supplier.
